

FUTARI DEEP SOAKING BATH

Specification Sheet

Pre-installation:

In terms of construction and plumbing, there is no practical difference between installing a deep soaking tub and a standard bathtub. The only rule is good plumbing. Each of our deep soaking tubs, with feet removed and turned on its side, will pass through a standard door of 29"/737mm. It may be necessary otherwise to remove the door's side panels or architraves, to make a wider gap. However, one of the major properties of our Ficore® composite, from which we build our baths, is that, to a small degree, it permits us to modify the external dimensions of a rectangular bath by building it with narrower or wider rims. You are not therefore tied to the exact dimensions on the specification sheet.

Dimensions

A	Rim width	95 3¾
B	-	77 3
C	-	51 2
D	Seat width	550 21½
E	Seat length	435 17¼
F	Rim downturn	40 1½
G	Internal height	650 25½
H	External height (to bottom of waste)	674 26½
I	Finished height	800 31½

See our FAQs for more details – www.cabuchon.com/faqs/

MAXIMUM WATER REQUIREMENT:

494 Litres, 108 Imperial Gallons, 130 US Gallons

WEIGHT: 35 kg/77 lbs (empty). 529 kg/1,166 lbs (filled to overflow.)

KEY TO SIZES: Millimetres Inches to nearest ¼"

Bathing Depth

In well: 565mm/22¼"

At seat: 470mm/18½"

Note: Manufacturing tolerances are + or - 3 mm.

Registered office: Whitegate, Lancaster LA3 3BT, England

Installation

The Futari can be installed sunken or semi sunken into a deck, or inset (drop-in), undermounted, or free standing with panels. Finished external height is 800mm/31½”.

Panels

We do not supply panels as standard because there are many possible styles and variations available to suit different décors. However, we are happy to do so on a bespoke basis. Panels are fabricated in Ficore® and they can be supplied either loose or integral to the bath. If the former, then for reasons of or security and stability, they are supplied in one piece - no matter how many sides are required.

Hydrotherapy Systems

The Futari deep soaking tub was designed to be fitted with one of our optional hydrotherapy systems, in order to deliver an even greater degree of pleasure and comfort, and to act as an aid to health. For details, specifications and illustrations, please refer to the Hydrotherapy section of our website. See: <https://www.cabuchon.com/hydrotherapy/>

Waste/Overflow

Due to its greater depth, the Futari requires an extended waste/overflow which we can provide - meaning that it requires a longer than standard cable to operate the plug (1000mm). We ship the bathtub with waste and overflow holes drilled; located as specified by the codes and regulations of the country where the bathtub is to be installed. We do not undertake to ship a bathtub with other predrilled holes. These should all be drilled on site to avoid possible miscommunication and error.

The overflow hole is located on the wide rim side, centred along the length of the bath.

Copyright Design

The Futari is a registered design of the company and is covered by copyright. The company, being committed to continuous innovation and improvement, reserves the right to change product specifications without notice.
